

## **Cytoplast Barrier Membrane**

A white barrier membrane has been placed in the area of socket grafting. This membrane was placed to preserve soft tissue architecture and keratinized tissue. Avoid this site when chewing and brushing so that it does not become dislodged.

You will need to return after at least 21 days to have this membrane non-surgically removed.

Please notify us if this membrane has become dislodged or if the area is bothering you because the membrane can be trimmed if necessary.

**Remember no question is too small and we are just a phone call away:**
